**EZ Series Touchpanels
have Enhanced Data
Acquisition & Ethernet
Connectivity Options**

EZDac (EZ's Data Acquisition \$99 Utility Option) uses the RS232 programming port to a PC or Ethernet for communicating with multiple panels allowing data acquisition in a PC remote from the panel. The user specifies tags and schedules for data acquisition. Data files are organized in a convenient, user selectable format (tab delimited or CSV) and can be opened in Excel or in any text editor.

EZDac Software installed on your PC can select any tag you want to monitor on the PLC / Panel, watch the data coming in real time (as compared to receiving only a snapshot when certain event occurs) and plot it into an Excel sheet automatically. Time intervals on event triggers can be selected from a wide range of options.

EZ Series Touchpanels have Earned their Name!

We named them “EZ Series” for a reason! We made an easy to use, simple operator interface that will save you a lot of engineering hours and design time due to its simplicity and ease of use. You don’t need prior programming knowledge to design a screen. You do not need to attend any classes to learn how to program them.

It is Intuitive, it is Simple!

ONLY ASSUMPTIONS:

- Familiar with Windows®-Based Environments
- Good Understanding of Your PLC Memory’s Address Formats

STEP 1 - Select an Object

- Click on “Objects” on the main menu bar
- Select the object you wish to create. In this example, we’ll click on “Switches”.
- You may also select an object from the tool bar below the main menu

STEP 2 - Fill in the Dialog Box

- A** Click the style of switch you wish to use.
- B** Select “Label Text”. This will allow you to name and customize the object.
- C** Select or create a PLC bit address tag that the “Switch” will activate.
- D** If you need password protection, click on the “Protection” tab at the top of the dialog box.
- E** If you wish to keep this object invisible until a PLC tag is triggered, click on the “Visibility/Details” tab.

STEP 3 - Place the Object

- Click on the screen and stretch the object to your desired size.
- If you want to edit the object again, simply double click to bring up the dialog box.
- You can even “Simulate” the object to see how it interacts in real time.

DEDICATED NON-WINDOWS OPERATING SYSTEM FOR SUPER-FAST RESPONSE & SCREEN UPDATE TIME

Switch between
screens in less
than a second!

**TYPICAL 0.75
SECONDS**

and not 2-3 seconds like others

Fastest Response to Touch Input

Because of the use of vector based graphics and a proprietary OS, EZ Series Touchpanels are universally recognized as having the fastest response to touch inputs, typically less than 3/4 of a second even with complex screens. This means no waiting and also less wear on a panel from operators pounding an object on a screen waiting for a response.
